JUNE 1958

General Summary of Weather Conditions

JUNE 1958

June temperature was generally below normal across Canada with the greatest anomaly eight degrees below normal at Trout Lake in northern Ontario, while southern Ontario and southern Quebec also had negative departures from normal ranging to six degrees. A number of Quebec stations reported record low mean temperatures for June. By contrast, temperatures were four to eight degrees above normal throughout the province of British Columbia which experienced the warmest June on record.

June precipitation was low along the Pacific Coast of British Columbia, in most of the Prairie Provinces, and in the Province of Nova Scotia. Elsewhere in Canada, the precipitation pattern was mixed, with both excesses and deficiencies occurring.

June was cool on the Island of Newfoundland, and the temperature dropped to freezing on the 5th of the month at a few localities, mostly inland. Mean temperatures for June were one to three degrees below normal inland, and close to normal along the south and west coasts.

June precipitation was generally not far from normal on the Island of Newfoundland. Buchans reported an excess of ninety per cent and St. Anthony an excess of sixty per cent, but these were exceptional, and all other stations on the Island were within fifteen per cent of normal.

Along the Labrador coast June mean temperatures were normal to one degree above normal while precipitation was twenty to seventy per cent above normal.

The Maritime Provinces were invaded by a number of cold air masses during June. In the early part of the month there were some late frosts, notably on the 10th when a number of western Nova Scotia stations reported one of the latest frosts on record in that locality. Mean temperatures for the month were one to three degrees below normal throughout Nova Scotia, except for a few stations on Cape Breton Island which were one or two degrees above normal. Most Prince Edward Island stations reported temperature deficiencies of one degree, in southern New Brunswick there were deficiencies of two to four degrees, and in northern New Brunswick four to six degrees.

Precipitation was showery in the Maritime Provinces during June, but there was general precipitation on the 1st, the 2nd, the 22nd, and the 26th. On each of these occasions a few stations reported over an inch of rain. For the month as a whole, there were precipitation deficiencies ranging to thirty per cent in Nova Scotia and Prince Edward Island. In the southern half of New Brunswick precipitation was very spotty, the range being from twenty per cent below normal to twenty per cent above normal, while in the northern half of that province there were generally excesses which ranged to fifty per cent.

The southern districts of Quebec experienced one of the coolest Junes on record. June mean temperatures were the lowest on record at a great number of places in the southern districts, among others at Montreal, Quebec, Megantic, Seven Islands and Sherbrooke, to quote some examples. At McGill University, Montreal, the mean June temperature of 61.2 F. came within 0.3 F. of setting a record. Temperature deficiencies were five to seven degrees in the southern sections of Quebec, two to five degrees in the central portion, while temperatures were normal to two degrees below normal in the extreme northern part of the province.

June precipitation in the Province of Quebec was mostly showery. However, there were general falls in the southern districts on the 14th to 16th and again from the 25th to 27th. Seven Islands recorded a total of 3.79 inches of rain for the three days 14th to 16th which was the heaviest fall for a single storm in Canada during the month. For the month as a whole, precipitation ranged to almost twice normal on the Gaspe Peninsula and in the Lake St. John area, while in the remaining southern districts of Quebec the range was from deficiencies of forty per cent to excesses of thirty per cent. Precipitation was heavy in the central and northern sections of Quebec, especially along the shores of Hudson Bay where all stations reported over twice the normal fall. Elsewhere in northern Quebec there were excesses ranging to eighty per cent.

Strong winds throughout the month of June accompanied frequent inflows of cool air over the province of Ontario. At Malton the average wind speed was the highest recorded for June in the twenty years for which wind records are available. At other Ontario stations, although the winds were strong new records were not established. Temperatures remained cool throughout the month and only on the last few days did temperatures reach the eighties. London Airport reported the lowest monthly mean temperature in 18 years of record. Mean temperatures were four to seven degrees below normal throughout the province except at Trout Lake where there was a deficiency of eight degrees - the greatest in Canada this month.

June precipitation was showery in the province of Ontario with showers most frequent during the second week and the first part of the fourth week. Distribution was irregular due to the showery nature of the precipitation, but generally there were excesses ranging to seventy per cent along Lake Erie, deficiencies ranging to forty per cent in the central part of southern Ontario, with smaller deficiencies in the Ottawa Valley. There were excesses in the Georgian Bay and North Bay areas ranging to sixty per cent but averaging about twenty per cent. In northern Ontario there were small excesses in Thunder Bay, Temiskaming and Cochrane districts; elsewhere in northern Ontario there were deficiencies ranging to forty per cent.

June was cool in the provinces of Manitoba and Saskatchewan. The coldest day of the month was on the 12th when the temperature fell to the low twenties at a good many places in both provinces. However, a number of new record minima for the date were reported on the 10th, 11th, 24th and 25th. The occurrence of frost on the 24th at Prince Albert was close to the fifty-seven year record of June 27th for the latest spring frost at that point, and Dauphin, Man. reported a record low June mean temperature. Temperature deficiencies ranged from two to six degrees in Manitoba, and from near normal to four degrees below normal in Saskatchewan.

June was dry in the provinces of Manitoba and Saskatchewan. What precipitation there was fell mostly as showers during the second half of the month. Deficiencies ranged from thirty to seventy per cent in Manitoba, and fifty to eighty per cent in Saskatchewan. A number of prairie stations reported the lowest total on record for the three months April to June, notably Brandon, where records date back to 1904, and Regina, where the record extends back to 1890.

The first few days of June were cool in the province of Alberta. This was followed by a few days of warm weather, followed in turn on the 10th by an outbreak of Arctic Air which brought temperatures below freezing at a number of Alberta stations. New record low temperatures for the date were set on the 10th at Calgary, Lethbridge and Medicine Hat. The second and third weeks of June were warm with temperatures reaching the high eighties on the 26th and 27th at southern points in Alberta.

June precipitation was showery in the province of Alberta with the most general showers occurring on the first four and the last four days of the month. The heaviest showers occurred on the 27th when Edson reported 2.76 inches with other stations reporting falls of over an inch on the 28th and 29th. For the month as a whole there were excesses ranging to fifty per cent, averaging thirty per cent throughout the foothills of Alberta extending north to Grande Prairie. In the eastern half of the province there were deficiencies which ranged to forty per cent.

In the province of British Columbia, pressure remained high in the northern and western parts of the province throughout practically the entire month of June. In consequence, June temperatures remained high. New records for June mean temperature were set at almost all major reporting stations in the province with the new values in some cases as much as four degrees above the old ones. For instance, at Victoria (Patricia Bay) the old record was 59.9, the new one 63.9; while at Ocean Falls the old record was 62.1, the new one was 66.2. Most other stations eclipsed the old records by about two degrees to make it the warmest June on record in British Columbia.

Continued high pressure kept precipitation abnormally low along the Pacific Coast of British Columbia where there were deficiencies ranging from fifty to over ninety per cent. Inland, showery precipitation brought a very irregular distribution. In the Okanagan Valley there were both excesses and deficiencies ranging to fifty per cent, while in the Kootenay Lakes district there were mostly excesses ranging to eighty per cent. The northern half of British Columbia generally reported precipitation fifty to eighty per cent below normal, while the remaining interior portions of the province experienced both deficiencies and excesses.

In the Yukon Territory June was generally warm with daytime temperatures reaching the eighties from the 5th to the 8th at all stations in the district, and again on the 19th and 20th. Mean temperatures for the month were three to six degrees above normal. Snag reported precipitation seventy per cent above normal, but all other stations in the Territory experienced precipitation deficiencies ranging from twenty to seventy per cent.

Aklavik reported an excess of June mean temperature of seven degrees but elsewhere in Mackenzie district mean temperatures were near normal. In Keewatin there were temperature deficiencies ranging to six degrees. On the Arctic Archipelago mean temperatures were generally within two degrees of normal. The only exception was at Cambridge Bay where a deficiency of four degrees was reported.

June precipitation was generally light in the Northwest Territories although the distribution was very irregular. In the district of Mackenzie the range was from excesses of twenty-five per cent at Fort Good Hope and Wrigley to deficiencies of over ninety-five per cent at Port Radium and Yellowknife. In the district of Keewatin all stations came within fifteen per cent of normal. On the Arctic Archipelago all stations reported deficiencies ranging to ninety-eight per cent but averaging about sixty per cent.

JUNE 1958

TEMPERATURE. PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:
MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.
The remaining columns give the following information:
PRECIP. The total precipitation in inches for the month including the rainfall and the water equivalent of the snowfall.
SUN The total hours of bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches lying on the ground at the end of the month (when reported).
The use of (A) following the station name indicates that the meteorological observations are taken at Airport offices and (R) indicates that the observations are taken at Radio Range Stations not at Airports.
